Experience

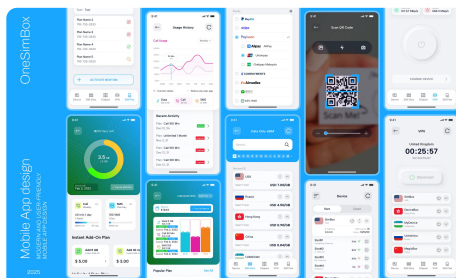

2017 – Present Tashkent

Freelance UX/UI Designer

Self-employed

- Design end-to-end interfaces for web and mobile applications, covering research, wireframes, prototypes, and final UI, using **Figma** as the primary tool.
- Build complete design systems (components, typography, color libraries) to keep client products consistent and easier to scale.
- Develop brand **Identities and logos** for clients across multiple industries, from concept through final assets.
- Partner directly with clients to translate business requirements into user flows and interface decisions, iterating based on feedback.
- Apply current UX practices and design trends to improve usability and the overall user journey across projects.
- Built parallel skills in visual storytelling and motion design using **Adobe Photoshop** and **Adobe After Effects**, deepening expertise in composition and color theory.
